## Job Description: Music Analyst and Transcriber

### Strong Computer and Music Skills

Do you have **perfect pitch and a superb ear** for the nuances of classical and jazz music?  
Are you a fine, **active pianist**? Do you read complex music scores readily?  
Do you have strong, **fearless computer skills**, especially experience with **MIDI**?  
Are you a **perfectionist**? Do you work efficiently with little supervision?  
Do you have a Masters degree (or higher) in performance?

Join us in inventing the 21<sup>st</sup> century equivalent of music transcription.

A full-time job, working in the Research Triangle Park area in North Carolina.

Excellent pay, stock options, full medical and dental benefits, IRA matching.

Our business turns audio recordings back into the data representing live performances.  
Join us on the ground floor of a major revolution in music production!

### Day-to-Day Activities

- This job calls for a skilled musician. However, the primary work is with new computer software; expect about 6 hours/day in front of a computer screen.
- Listen to original audio recordings, and assure that your generated data faithfully matches these recordings.
- Touch-up high-definition performance data, where necessary, to match the original recordings.
- Re-create portions of original performances by playing on robotic and virtual instruments, to get micro-measurements of how the performances were originally created.
- Be a primary user of our internally-developed computer software. Provide written feedback to software engineers on improvements, design alternatives, scaling, performance, and bugs. Test the changes.
